1. The declaration filed on 10/24/03 under 37 CFR 1.131 is sufficient to overcome the Eigen reference.
2. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Columbus ('624) discloses a device for monitoring a nucleic acid amplification process in which a thermal cycler is provided with a temperature cycling cuvette. Amplification and subsequent labeling of amplified product are accomplished within the cuvette and optical detection of the contents of the cuvette is utilized to identify amplified product. The method, and implicit apparatus, disclosed in Columbus differs from the claimed invention in that it fails to teach the optical detection apparatus as being operable throughout the amplification reaction process, opting instead to limit optical detection to a time immediately following the amplification reaction.
3. This is the 4th notice of allowability issued on the pending claims. A full description of reasons for allowance is provided in the preceding notices.
